

ABSTRACT OF THE DISCLOSURE:

**TITLE: METHOD FOR PREDICTABLY FEEDING AND CONSUMING
 RAM MEMORY TO RECOGNIZE OVER-CONSUMPTION OF
 RESOURCES**

 The present invention is a method for providing
the consumption of a set amount of memory within a set
amount of time in a server network in order to properly
display the capabilities of running multiple applications
5 proprietary suite of tools with the intention of being
able to predictably trigger recovery events, and to
discover when an application is "over-consuming" memory.
